

Interlock Support for Medium-Sized Businesses

- ▼ **Interlock** was specifically formed to help growing companies develop new technologies. We offer consulting, engineering, project management, drafting, supply chain and strategy consulting to medium and growing companies. Contact us for a free appointment and leverage our experience to help you grow your business and connect with a global market.

▼ **COST REDUCTION VALUE ENGINEERING**

Early production includes high costs. Now is the time to leverage Interlock's diverse network of supply chain partners and engineering specialists to reduce cost, simplify production, and protect your competitive advantage as you grow into new markets.

▼ **SCALING**

Interlock can help you scale up production, services, or resources-count while respecting your fiscal plan. Our diverse supply chain network and schedule-oriented project managers will work to ensure your technology is ready on time and on budget. Warehousing, strategic sourcing, and international growth are part of our core experience portfolio.

▼ **RESEARCH AND DEVELOPMENT**

Once committed to a product or service, R&D can divert key resources. Interlock can fill this need with third party validation, experimental design, accelerated aging, as well as conventional FEA, CFD and design. Let our engineers develop an R&D strategy that keeps you competitive in a challenging market while relieving core resources to focus on business development.

▼ **SUPPLY CHAIN SUPPORT**

As your company scales, the decision on what to make and what to buy will become critical to your success. Interlock has decades of experience with strategic "make/buy" and provides support to new companies as they distinguish what products or services to outsource. Supply chain development is often a transient concern and is ideal to subcontract while your team focuses on strategic development.
